Danilo Dionisia

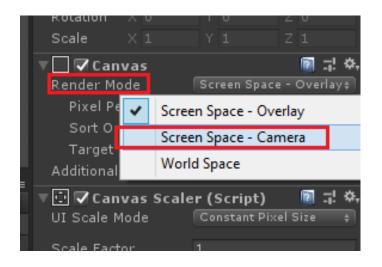

Pegue o projeto que você criou no tutorial criando colisões e continue...

Clique com o botão direito do mouse na lado esquerdo (Hierarchy) e siga os passos da imagem.

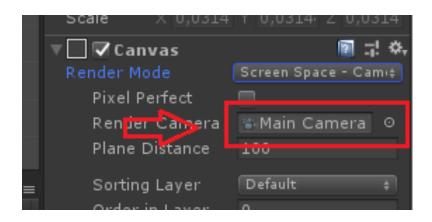

Clique no objeto Canvas e altere a propriedade do campo Render Mode

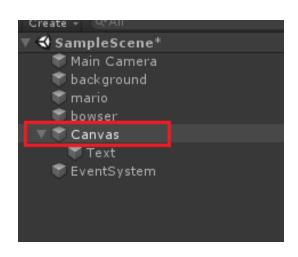

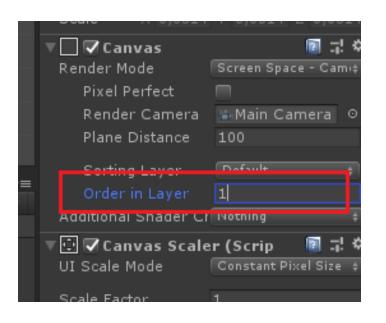

Agora arraste a Main Camera para dentro do campo Render Camera

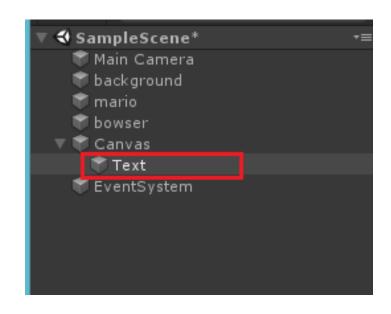

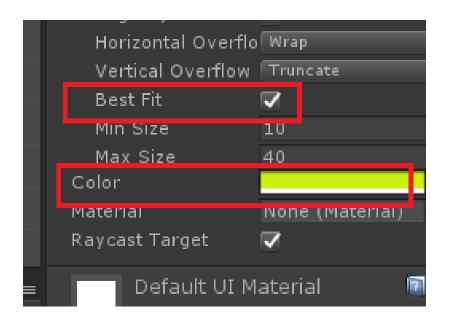

Selecione o objeto Canvas e altere a Order in Layer

Selecione o campo Text e altere a cor e ajuste como Best Fit

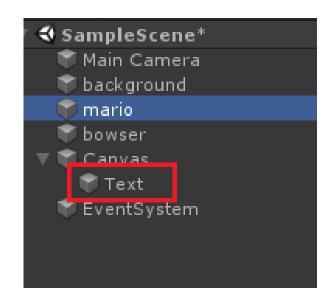

Agora altere o script do player, escreva o que está dentro dos quadros vermelhos

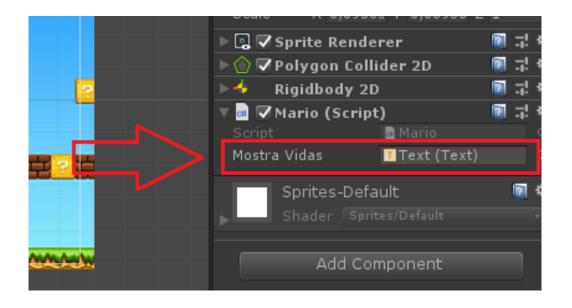

```
□using System.Collections;
      using System.Collections.Generic;
      using UnityEngine;
      using UnityEngine.UI;
5
6
     □public class Mario : MonoBehaviour
8
          public Text mostraVidas;
          int vidas;
0
          float vel, scaleX, scaleY;
3
          Movimento mov = new Movimento();
          void Start()
              vidas = 3;
              mostraVidas.text = "Vidas: " + vidas;
8
9
0
              vel = 0.05f;
              scaleX = transform.localScale.x;
              scaleY = transform.localScale.y;
3
```

Escreva o código do quadro vermelho

```
public void OnCollisionEnter2D(Collision2D collision)
    if(collision.gameObject.tag == "koopa")
        vidas = vidas - 1;
        mostraVidas.text = "Vidas: " + vidas;
        if (vidas < 1)
            Destroy(this.gameObject);
            print("Game over!");
```

Clique sobre seu player e arraste seu objeto Text para dentro do seu script

Execute o Visual Studio e seu Unity para testar
